Note: Employees are assigned an estimated change in value added based on their main industry of employment. 'Very high', 'high', 'mid' and 'low' exposure industries are those that are estimated to experience a reduction in value added of more than $5 \%$, more than $3 \%$ but less than or equal to $5 \%$, more than $1 \%$ but less than or equal to $3 \%$, and less than or equal to $1 \%$ respectively. Totals do not equal those in Tables A.3a and A.3b as not all individuals in the Quarterly Labour Force Survey report their education or occupation.
